

# BALLOON ROCKET

Make a whooshing balloon rocket at home. Discover how things are propelled by air pressure.

You will need:

1. Cut a piece of string to a bit more than two big steps long and thread it through a straw. Tie each end of the string to the back of a chair.

2. Blow up the balloon and fasten the end with a bulldog clip. Tape the balloon to the straw with sticky tape.

3. Move the balloon to one end and very quickly remove the clip. Watch the balloon rocket whoosh!

You can decorate your balloon to look more like a rocket!
